

SALES POSITIONING

Who we help • Problems we solve • Why clients choose us • Differentiation

Built around CoExtend Global's façade, construction estimating, drafting/BIM and dedicated-resource model.

1. Executive Sales Positioning

CoExtend Global should not sell itself primarily as a generic outsourcing vendor. The stronger position is: an extended technical delivery team for façade, roofing, building-envelope and construction businesses that need more estimating, drafting, BIM and commercial capacity without committing to immediate local hiring.

This positioning fits the company's public description of construction estimating, quantity takeoffs, drafting, BIM/software support and dedicated resources for UK, US and Canadian clients. Public company/job material also positions the business around contractors, fabricators, consultants and technology companies. [Source: research notes]

Positioning question	Recommended CoExtend answer
Who we help	Façade/cladding/roofing contractors, specialist subcontractors, fabricators, main contractors, commercial teams, consultants and selected construction/proptech technology companies.
What we help them do	Estimate more work, prepare tenders faster, produce construction-ready drawings and BIM outputs, and add technical capacity during peaks.
What problem we solve	Capacity bottlenecks, tender deadlines, repetitive production workload, recruitment delays, inconsistent takeoffs/drawings and the overhead of maintaining every specialist in-house.
How we are different	A specialist, engineering-led extension of the client team rather than a generic low-cost task vendor: façade knowledge + estimating + drafting/BIM + flexible resourcing.
Core proof points	Publicly stated 15+ years of combined industry experience; software/tool familiarity; UK/US/Canada focus; published 24–72 hour example turnaround and 300+ project / 98% on-time claims in company LinkedIn activity. Treat the performance figures as company-published claims, not independently audited facts. [Source: research notes]

2. Who We Help

The best-fit customer is not simply “any company that needs estimating.” CoExtend creates the most value where technical workload fluctuates, deadlines are commercially important and the client already has a delivery process into which an external technical team can plug.

Priority	Ideal client profile	What they buy from CoExtend	Trigger event
A	Façade / cladding / roofing subcontractor	Takeoffs, BOQs, estimates, tender support, shop drawings, BIM, dedicated estimator/drafter	Tender backlog, bid deadline, estimator leaves, new framework/project wins
A	Façade / envelope fabricator	Detailed takeoffs, fabrication/shop drawings, schedules, revisions, production support	Factory workload rises; drawing revisions; need to release fabrication
A	Main contractor / commercial team	Trade takeoffs, package estimates, drawing review, tender support, document production	Multiple tenders live at once; internal QS team overloaded
B	Façade consultant / specialist design practice	Drafting, BIM production, coordination support, documentation	Design workload spikes or delivery deadline compresses

Priority	Ideal client profile	What they buy from CoExtend	Trigger event
B	Construction technology / proptech company	Product/UI/full-stack support where construction-domain understanding matters	Product backlog or need for domain-aware technical resources
B	SME contractor needing a dedicated remote team	Monthly dedicated estimator/CAD/BIM resource	Wants recurring capacity without local headcount expansion

Decision-maker map: Managing Director/Owner usually buys capacity and risk reduction; Commercial Director/Estimator buys tender throughput and accuracy; Technical Director/Design Manager buys drawing/BIM capacity; Operations/Project Manager buys delivery reliability; Procurement/Finance evaluates commercial fit and contract risk.

3. What Problem We Solve

Problem	What the client experiences	CoExtend response
Tender overload	A small estimating team has more opportunities than it can measure and price before bid deadlines.	Move production takeoff/estimate work to a dedicated technical extension team while the client retains commercial control.
Recruitment bottleneck	The client needs another estimator, drafter or BIM technician but hiring locally takes time and adds fixed overhead.	Provide project-based or dedicated monthly technical capacity.
High-value staff doing production work	Senior estimators/designers spend hours on repetitive takeoffs, markups, schedules, revisions and document formatting.	Shift repeatable production tasks to a trained support team so senior staff can focus on judgement, clients and winning work.
Inconsistent outputs	Different people use different formats, assumptions and drawing conventions, making review slow.	Work to the client's templates, naming conventions, scope structures and agreed review process.
Peak/valley workload	Technical workload varies by tender cycles and project stages.	Scale resource up or down by project or month rather than carrying all capacity permanently.
Cost pressure without quality loss	The client needs additional capacity but local payroll cost makes permanent expansion unattractive.	Offer a remote capacity model where appropriate, while positioning quality, process and technical understanding ahead of low price alone.

Important sales rule: do not lead with “cheap outsourcing.” Lead with “capacity, speed, specialist knowledge and dependable production,” then explain the commercial efficiency of the remote model.

4. Why Clients Use Us

Client job-to-be-done	Value created	Sales language
Get a tender out on time	More bid capacity without increasing internal workload	“Give us the drawing package; we will turn the production workload into a structured tender output.”
Free senior people from repetitive production	More time for client meetings, strategy, pricing judgement and project management	“We handle the production layer so your senior team can focus on decisions.”
Absorb workload spikes	Avoid recruitment for temporary peaks	“Use us when the pipeline is heavy, not only when the org chart is full.”
Standardize estimating/drawing outputs	Cleaner review and faster handover	“We can work inside your existing templates, naming and QA process.”

Client job-to-be-done	Value created	Sales language
Increase bid throughput	More opportunities can be reviewed and priced	"Capacity becomes scalable rather than fixed."
Keep sensitive work controlled	Confidentiality and access arrangements support remote delivery	"NDA-friendly, controlled access and defined project scope."

5. Why Clients Choose Us

This section should answer the question: "Why you rather than another estimator, freelancer or offshore provider?"

1. Façade-first technical identity — CoExtend can present façade/cladding, roofing and building-envelope work as a specialist capability rather than treating it as one trade inside a generic estimating menu.
2. Estimate + drawing + BIM in one relationship — The combination of takeoff/estimating and drawing/BIM support reduces handoffs between separate vendors. This is strategically stronger than selling isolated measurement only.
3. Flexible commercial models — Clients can use one-off project support, hourly resources or a dedicated monthly/retainer model depending on workload.
4. Client-workflow alignment — The strongest promise is not merely "we know AutoCAD/Revit/Bluebeam." It is "we can fit into the way your team already works." Public CoExtend material specifically references AutoCAD, Revit, Bluebeam and PlanSwift, along with React/Next.js/Node.js/React Native for software work. [Source: research notes]
5. Cross-border operating model — The company is positioned for UK, US and Canadian clients and can sell the time-zone advantage as an extension-team model rather than a transactional outsourcing service. [Source: research notes]
6. Pilot-first risk reduction — A free or low-risk pilot is a strong commercial mechanism because clients can judge accuracy, communication and turnaround before moving to a recurring engagement. This should be used intentionally, with a defined sample scope and success criteria.

6. Key Differentiators & Strongest Selling Points

Differentiator	Why it matters	Strength today	How to make it stronger
Façade specialization	Buyers prefer domain knowledge when drawings, systems and scope are complex.	High	Build sample packs, system-specific capability sheets and case studies.
Integrated estimating + drafting/BIM	One partner can carry information between commercial and technical outputs.	High	Demonstrate "takeoff → estimate → shop drawing/BIM" workflow.
Dedicated resource model	Useful for recurring workload and long-term client integration.	High	Publish clear resource roles, onboarding, QA and communication model.
Fast response / turnaround	Critical when tenders are deadline-driven.	Medium-High	Measure real median turnaround and publish only verified metrics.
International standards familiarity	Reduces rework for UK/US/Canada projects.	Medium-High	Document NRM2/SMM7 and CSI/MasterFormat examples and sample outputs.
Construction + software capability	Potentially valuable for proptech clients.	Differentiating	Keep this as a second vertical; avoid confusing the core façade/estimating message.

Differentiator	Why it matters	Strength today	How to make it stronger
Pilot / low-risk entry	Reduces buyer resistance.	Strong sales tactic	Standardize pilot scope, pricing/terms and conversion pathway.

7. Our Strongest Selling Points

Capacity on demand — The clearest commercial proposition: the client can add specialist production capacity when needed without immediately adding equivalent local headcount.

Façade technical understanding — A façade-focused identity is more defensible than generic “data entry / outsourcing / takeoff” positioning.

Production + commercial support — CoExtend can support the chain from drawing review and quantities through BOQ, costing, tender support and drawing production.

Recurring partnership — The retainer/dedicated-resource model can move the relationship from one-off project vendor to embedded technical partner.

Practical communication — For overseas clients, responsiveness, clear questions, assumptions registers and revision discipline can matter as much as raw technical skill.

Scalable scope — Clients can start with a small tender or pilot and expand to recurring resource support once trust is established.

8. Weaknesses / Sales Risks

A strong sales document should expose the weaknesses that buyers may notice. These are strategic observations, not statements of legal or financial fact.

Potential weakness	Why it matters	Mitigation
Relatively small brand visibility	Large contractors may default to established global outsourcing/consulting brands.	Use proof aggressively: samples, case studies, references, named processes, response SLA, and pilot.
Limited public case-study depth	Buyers cannot easily judge the quality of outputs before engaging.	Create 5–8 anonymized case studies covering takeoff, estimate, shop drawing and BIM.
Performance claims need substantiation	Claims such as 98% on-time / 300+ projects are useful but should be evidence-backed before appearing in formal proposals.	Maintain an internal delivery dashboard and use verified numbers only.
Broad service menu can dilute specialization	Estimating + BIM + software may look unfocused.	Lead with façade/building-envelope technical services. Present software as a separate capability or digital innovation arm.
Offshore perception / commoditization risk	Some buyers equate offshore with low-cost transactional work.	Sell integration, technical quality, dedicated people, QA and accountability rather than price.
Dependency on founder-led sales	A founder-led relationship is powerful but difficult to scale indefinitely.	Systematize ICP, qualification, proposal templates, CRM stages, case studies and account management.
Proof of standards / certifications	Buyers may ask for formal accreditations or documented QA procedures.	Keep an evidence pack ready: sample deliverables, QA checklist, NDA process, cybersecurity/access controls and standards matrix.

9. Competitor Landscape

The competitive set is broad. CoExtend is not only competing with façade specialists; it can lose a deal to a freelancer, a general estimating service, a dedicated outsourcing provider, a staffing firm or increasingly an AI takeoff product. The examples below are benchmark references identified during September 2026 research, not claims of direct commercial rivalry or market share.

Competitor / category	Observed proposition	Where they are strong	CoExtend counter-position
TakeOff Technology	UK-based quantity surveying, BOQs, cost estimates, takeoffs, tender support; publishes 48-hour takeoff positioning. [Source: research notes]	UK QS credibility, clear standardized deliverables, speed	Differentiate on façade specialist depth + integrated drafting/BIM + dedicated resource option.
TSC Facade / specialist façade estimating	Facade/cladding/roofing estimating with BOQ, takeoff, pricing and subscription-style support. [Source: research notes]	Strong UK façade focus and commercial packaging	Compete on broader technical production stack and India-based dedicated-resource leverage; prove quality with samples.
Facade Estimators / specialist support	Overflow façade estimating for UK subcontractors, structured Bluebeam takeoffs and fixed-fee positioning. [Source: research notes]	Clear niche and simple buying path	Offer same clarity plus drafting/BIM and recurring embedded team capability.
Takeofix / general takeoff providers	Remote estimating/takeoff across multiple countries and trades. [Source: research notes]	Broad coverage and simple outsourced workflow	Avoid competing trade-by-trade; sell specialist façade depth and integrated workflow.
K2E / estimating outsourcing	Remote estimates, takeoffs, quote leveling and next-day bid support. [Source: research notes]	Fast GC-oriented bid support and review workflow	Target specialist façade/envelope and production integration; demonstrate domain knowledge.
AI / software takeoff tools	Automated drawing interpretation and estimation; some offer free trials and low monthly pricing. [Source: research notes]	Very low marginal cost and speed	Position people + QA + interpretation + client-specific scope rules as the safety layer; use AI internally, not as a price-only race.
Freelance estimator / QS	One expert directly handles a tender.	Judgement, direct accountability, often simple engagement	Win when client needs more capacity, recurring support, drafting/BIM or scalable coverage rather than one person.
In-house hiring	Permanent estimator/drafter/QS.	Control, continuity, team integration	Win on speed to capacity, flexibility and lower commitment for peak workload; acknowledge that some clients still need in-house ownership.

10. Why We Are Different from Competitors

The most defensible differentiation is a combination, not a single feature: specialist façade understanding + estimating + drawings/BIM + flexible dedicated-resource delivery + an overseas extended-team operating model.

Competitor choice	What buyer gets	CoExtend advantage
Freelancer	One person / one project	Broader bench, backup capacity and ability to combine estimating + drafting/BIM.
Generic takeoff vendor	Measured quantities	More of the project information chain: takeoff, estimate, tender support, drawings and BIM.
Large outsourcing company	Scale and standardized delivery	More specialized façade identity and potentially more agile founder-led communication.
Local hire	Permanent internal capacity	Faster access to capacity and flexible commitment; client avoids immediate recruitment cycle.
AI takeoff software	Automation and low unit cost	Human judgement, interpretation, scope control, drawing production and accountability around the output.
Specialist façade estimator	Strong trade knowledge	Add integrated drawings/BIM, dedicated resource model and wider technical support.

11. Core Sales Messages

Primary one-liner — “CoExtend Global is the extended technical team for façade and construction businesses that need more estimating, drafting and BIM capacity without adding immediate local overhead.”

Capacity-led version — “When your tender pipeline grows faster than your team, we add the technical capacity to measure, estimate, draw and deliver.”

Façade-led version — “We support façade, cladding, roofing and building-envelope teams with specialist takeoffs, estimating, shop drawings, BIM and dedicated technical resources.”

Retainer version — “Add a dedicated remote estimator/drafter to your team without waiting through another recruitment cycle.”

Pilot version — “Start with one project. Review the quality, communication and turnaround. Scale only when the fit is proven.”

12. Buyer Objections & Recommended Responses

Likely objection	Best response angle	Evidence to provide
“We already have estimators.”	“We are not asking you to replace them. We take the production load when they are overloaded.”	Pilot takeoff / sample turnaround.
“We can hire someone locally.”	“You can. The question is whether you need permanent capacity or flexible capacity now.”	Simple cost/time comparison; do not overpromise savings.
“How do I know your quantities are accurate?”	“We use defined scope, assumptions, drawing references, QA/review and your agreed format.”	Anonymized sample with markups and review checklist.
“We have had bad offshore experiences.”	“Start small and measure us against a defined pilot.”	Pilot scope, NDA, named point of contact, review gates.
“Your service sounds too broad.”	“Our core is façade/estimating/drafting/BIM. Software is a separate capability for clients who need digital support.”	Capability matrix and two focused service sheets.
“Will your team understand our standards?”	“We align to the measurement, drawing and commercial format you already use, including the applicable UK/US frameworks.”	Standards matrix + sample output.

13. Sales Strategy Recommendations

Narrow the top-of-funnel ICP — Prioritize UK and North American façade/cladding/roofing subcontractors and specialist fabricators before broadening into general construction.

Sell outcomes, not task names — “More bids submitted” and “senior estimator freed from production” are stronger than a list of software skills.

Make the proof visible — Build a reusable evidence pack: anonymized takeoff, BOQ, cost sheet, shop drawing, BIM snapshot, QA checklist, assumptions register and turnaround example.

Use a two-step offer — Offer (1) a defined pilot project and (2) conversion to monthly dedicated resource / retainer when workload is recurring.

Build a pricing ladder — One-off job → recurring project support → part-time dedicated resource → full dedicated team. This creates a natural expansion path.

Turn every project into proof — Track scope, turnaround, revisions, client feedback, rework and win outcomes so sales claims increasingly come from measured internal data.

Keep software as a strategic differentiator — Use software/AI capability to show CoExtend can improve the client's workflow, but do not let it obscure the core façade/estimating proposition.

14. Research & Verification Notes

This document combines CoExtend Global information visible in current public sources with strategic positioning based on the company/service work developed in this engagement. Publicly sourced facts are cited below. Internal recommendations and strategic judgments are intentionally labelled as such.

CoExtend Global LLP – LinkedIn job/company description — Public company description: construction estimating, quantity takeoffs, drafting, software development, UK/US/Canada, 15+ years combined experience, project lifecycle support.
