

02 - Services Profile

Construction Estimating | Take-Offs | BOQs | Tender Support | Shop Drawings | Façade Engineering | Technical Documentation | Dedicated Resources

Research basis: current public company/job information plus the detailed service scope developed in our CoExtend Global operating discussions.

Research date: 8 September 2026

Service Portfolio

No.	Service	Primary purpose
1	Façade Estimating	Detailed façade/cladding cost and quantity estimating
2	Quantity Take-Off	Traceable measurement from drawings/specifications/models
3	BOQ Preparation	Structured commercial bill of quantities
4	Tender Support	Pre-construction bid and submission assistance
5	Cost Estimating	Cost build-up using project/client rates and supplier inputs
6	Shop Drawings	Fabrication/installation/detail drawings
7	Façade Engineering Support	System, interface and technical detailing support
8	Technical Documentation	Controlled technical records and handover information
9	Retainer Resource Model	Dedicated recurring monthly technical capacity
10	Hourly Resource Model	Flexible short-term or overflow capacity

Positioning note: the service chain is deliberately integrated. A client can use CoExtend Global for one task, several linked tasks, or recurring dedicated capacity.

1. Façade Estimating

What it is

Preparation of detailed façade and cladding estimates from architectural, structural, specification and tender information, with emphasis on system build-up, interfaces, quantities and commercial completeness.

What we deliver

Material/system takeoffs; façade areas; panels/cladding; rails; brackets; clips; insulation; membranes; flashings; copings; trims and ancillary components where shown; labour/installation allowances when required; assumptions, exclusions and estimate summaries.

Who needs it

Façade contractors, cladding contractors, main contractors, specialist subcontractors, fabricators and consultants bidding building-envelope packages.

Typical problems it solves

Incomplete tender packs; missed components; unclear system build-ups; quantities not tied to zones/elevations; interface omissions; compressed bid deadlines; estimator capacity bottlenecks.

Why choose us

Specialist building-envelope focus; practical understanding of façade systems; drawing/specification cross-checking; structured project-breakdown outputs; ability to work to client templates and pricing conventions.

Typical turnaround

Company-published material cites 24–72 hours for suitable estimates/shop drawings. Actual turnaround depends on project size, drawing quality, scope and revisions.

Typical standards / references

UK: NRM2 / SMM7 where required. US/Canada: CSI MasterFormat conventions where required. Project/client documents take precedence.

2. Quantity Take-Off

What it is

Detailed measurement of construction quantities from drawings, schedules, specifications and models for pricing, procurement, planning or validation.

What we deliver

Line-item quantities by material/system; areas, lengths, counts or volumes as appropriate; project-breakdown tagging; marked-up references; assumptions, exclusions and query points.

Who needs it

Estimators, QS teams, contractors, subcontractors, fabricators and procurement teams needing independent or overflow measurement capacity.

Typical problems it solves

Large drawing sets; repetitive manual measurement; fragmented information; inconsistent naming; missed items; revision difficulty; limited internal estimating capacity.

Why choose us

Takeoffs can be structured by building, block, floor, elevation, zone or work package, making the output commercially useful rather than a raw quantity list.

Typical turnaround

Project-specific. Company-published examples cite 24–72 hours for suitable estimates/takeoffs; complex packages may require longer.

3. BOQ Preparation

What it is

Translation of measured quantities and scope information into a structured Bill of Quantities suitable for pricing, tendering, comparison and commercial control.

What we deliver

BOQ line items; descriptions; units; quantities; work-package grouping; project breakdown; assumptions/exclusions; optional material/labour splits; client-format pricing columns where required.

Who needs it

Contractors, specialist subcontractors, QS practices, procurement teams and project teams requiring a clean commercial schedule.

Typical problems it solves

Quantities scattered across spreadsheets; inconsistent descriptions/units; poor scope breakdown; difficulty comparing supplier quotations; weak traceability to drawings.

Why choose us

The BOQ is built around the project's actual package structure and the client's commercial workflow, supporting easier review and pricing rather than merely presenting totals.

Typical turnaround

Normally delivered as part of takeoff/estimating workflow; timing is set by the tender or commercial programme.

4. Tender Support

What it is

Pre-construction support that helps a contractor or specialist subcontractor prepare an accurate and well-organized tender return within deadline.

What we deliver

Drawing/specification review; scope matrix; takeoff; BOQ; pricing support; assumptions/exclusions; clarification lists; supplier quotation comparison; tender schedules and revisions.

Who needs it

Façade/cladding subcontractors, fabricators, main contractors and specialist trade contractors handling multiple concurrent bids.

Typical problems it solves

Tender deadlines; incomplete information; specification conflicts; unclear responsibility boundaries; multiple bids arriving together; limited senior estimator time.

Why choose us

Works as an extension of the client's estimating team and can follow the client's templates, commercial rules, approval process and tender conventions.

Typical turnaround

Can be prioritized around the bid deadline. Company-published material cites 24–72 hours for suitable estimate/shop-drawing assignments.

5. Cost Estimating

What it is

Conversion of scope and quantities into an actionable project cost estimate or budget using project-specific, client or supplier rates.

What we deliver

Estimate workbook; material/labour/plant or other cost splits where required; rate application; supplier quote inputs; allowances; exclusions; commercial summary; revision/variance support.

Who needs it

Contractors, subcontractors, developers, consultants and project teams needing pre-contract or budget visibility.

Typical problems it solves

Inconsistent rate structures; outdated pricing; difficult supplier comparison; unclear allowances; uncontrolled revisions; weak audit trail.

Why choose us

Can be built around the client's existing rate libraries, quotation records, templates and approval rules instead of forcing a generic format.

Typical turnaround

Project-specific; urgent/rush estimating can be accommodated subject to data quality and available capacity.

6. Shop Drawings

What it is

Production of detailed drawings used to coordinate, fabricate and/or install façade and related building-envelope components.

What we deliver

Plans, elevations, sections and details; panel layouts; setting-out; profiles and trims; bracket/rail arrangements; interfaces; dimensions; material references; revisions/registers where required.

Who needs it

Façade contractors, fabricators, installers, architects, engineers and manufacturers.

Typical problems it solves

Design information not detailed enough for fabrication; coordination conflicts; repetitive drawing production; internal drafting backlogs; revision pressure.

Why choose us

Combines façade subject knowledge with CAD/BIM workflows and can follow project standards and client drawing templates.

Typical turnaround

Company-published material cites 24–72 hours for many suitable shop-drawing requests; complex systems and multi-revision packages require project-specific programming.

7. Façade Engineering Support

What it is

Technical support around façade system build-ups, interfaces, detailing and design-development. Unless a project contract assigns regulated design responsibility to appropriately qualified parties, this should be positioned as engineering/detailing support rather than independent professional design certification.

What we deliver

System build-up documentation; detail development; connection/interface support; drawing review; coordination notes; material/system schedules; technical queries; design-development support.

Who needs it

Façade contractors, façade consultants, engineers, architects and manufacturers needing additional technical capacity.

Typical problems it solves

Unclear build-ups; structure/façade interface gaps; coordination issues; design changes; insufficient detailing bandwidth; incomplete technical documentation.

Why choose us

Strong integration between technical, estimating and drawing workflows can reduce information loss between commercial and design teams.

Typical turnaround

Highly dependent on design stage, package size, responsibility matrix and revision cycle.

8. Technical Documentation

What it is

Preparation and organization of technical records supporting procurement, fabrication, construction, handover and future project reference.

What we deliver

Technical submittal support; material/system schedules; drawing registers; revision records; installation/fabrication records; as-built information; scope/interface notes; organized digital document sets.

Who needs it

Contractors, subcontractors, fabricators, consultants and project teams with documentation-heavy workflows.

Typical problems it solves

Files scattered across folders; inconsistent naming; missing revisions; unclear document status; difficult handover; repetitive technical administration.

Why choose us

Outputs are designed to be controlled, traceable and aligned to project breakdowns, helping teams find the right information quickly.

Typical turnaround

Usually an ongoing project support activity rather than a fixed generic turnaround.

9. Retainer Resource Model

What it is

A dedicated monthly resource model providing recurring technical capacity aligned to the client's own workflow, tools, templates and priorities.

What we deliver

Dedicated estimator/QS, façade draftsman/detailer, BIM resource, commercial support or technical-documentation resource; agreed capacity; recurring delivery; direct coordination with the client team.

Who needs it

Growing contractors and specialist subcontractors with recurring workloads that do not justify immediate local hiring, or firms needing predictable technical capacity.

Typical problems it solves

Recruitment delays; fixed overhead; fluctuating bid workload; specialist staff shortages; poor continuity from project-by-project outsourcing; need for a resource that learns the client's system.

Why choose us

Positioned as an extension of the client team. Company-published messaging emphasizes dedicated resources, client workflow integration, client templates and UK/US/Canada standards conventions.

Typical turnaround

Ongoing monthly service. Hours, availability, exclusivity, communication channels, software access and SLA should be defined in the client agreement.

10. Hourly Resource Model

What it is

Flexible access to technical capacity billed on an hourly basis for irregular workloads, urgent tasks, short-term gaps or trial engagements.

What we deliver

Estimator/drafter/BIM/documentation/commercial support hours; overflow tasks; revision assistance; urgent support; agreed availability windows.

Who needs it

Clients with unpredictable workload, occasional specialist needs, temporary staff gaps or a preference to test the working relationship before moving to a retainer.

Typical problems it solves

Full-time hiring is not justified; workload fluctuates; deadlines are short; internal resource is temporarily unavailable; one-off specialist work is required.

Why choose us

Lower commitment than a monthly dedicated resource while retaining access to specialist capability and standardized delivery processes.

Typical turnaround

Agreed hourly rate and availability; turnaround depends on scope, queue priority and required review cycles.

Recommended End-to-End Delivery Workflow

1. Receive tender/project package: drawings, specifications, schedules, addenda, client template and deadline.
2. Intake and scope check: identify package boundaries, missing information, drawing revisions and commercial assumptions.
3. Project breakdown: organize by building, zone, block, floor, elevation, system or work package.
4. Technical interpretation: identify façade build-ups, materials, thicknesses, spacing, components and interfaces that affect quantity and cost.
5. Measurement: perform traceable quantity takeoff with drawing references and revision control.
6. Commercial build: produce BOQ/estimate, apply rates or supplier quotations, and document assumptions/exclusions.
7. Technical output: prepare shop drawings, schedules, documentation or other contracted deliverables.
8. QA review: check quantities, formulas, drawing references, system consistency, revisions and requested format.
9. Client review/clarification: issue queries and incorporate agreed responses or revisions.
10. Final submission and archive: deliver controlled files and retain a project record for future changes and variations.

Positioning Summary

- Specialist construction estimating and technical delivery rather than generic back-office outsourcing.
- An integrated service chain from takeoff and BOQ through estimating, shop drawings and documentation.
- Flexible engagement: individual projects, hourly support or dedicated monthly resources.
- Adaptable to UK, US and Canadian project conventions and client-specific templates.
- Engineering + commercial + digital capability, with the company publicly describing both construction technical services and software development.
- Company-published performance messaging includes 24–72 hour delivery on suitable estimates/shop drawings, 98% on-time delivery, and 300+ successful projects; these should be presented as company-reported claims, not independently audited metrics.

Research & Verification Notes

- Current public LinkedIn job information describes CoExtend Global LLP as a technical services company specializing in construction estimating, quantity takeoffs, drafting and software development for clients in the UK, US and Canada, with services across cost estimation, tender support, shop/fabrication drawings and as-built documentation.
- Public company-related LinkedIn material also describes AutoCAD, Revit, Bluebeam and PlanSwift in construction workflows and React, Next.js, Node.js and React Native in software-development workflows.
- The 24–72 hour, 98% on-time and 300+ project figures are treated as company-published claims.

- Façade engineering services are described here conservatively as technical/detailing support unless formal professional design responsibility is contractually and legally assigned to qualified parties.
- The detailed service descriptions also incorporate the operational model developed in our previous discussions; these elements are internal working context and should not automatically be treated as independently verified public claims.
